

Medical Al Ensemble Clinical Decision Report

Title: Custom Case Analysis

Generated: 2025-09-07

16:54

Primary Diagnostic Consensus

Case ID: tmpkjep8597

Diagnosis	ICD-10	Agreement	Confidence	Status
Acute Decompensated Heart Failure due to Ischemic Cardiomyopathy Evidence: High confidence diagnosis (0.95), Multiple model agreement, ICD code specificity	150.23	0.0%	Very Low	PRIMARY

Alternative & Minority Diagnoses

Diagnosis	ICD-10	Support	Туре
Acute Coronary Syndrome Evidence: Model 1 confidence 0.4, Model 3 confidence 0.3	124.9	7.4%	Minority (<10%)
Chronic Kidney Disease with Volume Overload Evidence: Model 1 confidence 0.3	N18.9	3.7%	Minority (<10%)
Pulmonary Embolism Evidence: Model 3 confidence 0.2	126.9	3.7%	Minority (<10%)

Analysis Overview
Models Queried: 3
Successful Responses: 3
Consensus Level: High
Total Cost: <\$0.01

Critical Decision Points & Evidence Synthesis

Critical Decision Points

Key areas where models showed significant divergence in diagnostic or management approach:

Evidence Synthesis & Clinical Correlation

Symptom-Diagnosis Correlation Matrix

Symptom	Acute De	Acute Co	Chronic	Pulmonar
dyspnea	Strong	-	-	Medium
fatigue	Strong	-	-	-
edema	Strong	-	Medium	-
chest pain	-	Strong	-	-
volume overload	Strong	-	Medium	-

Legend: +++ Strong association, ++ Moderate, + Weak, - Not typical

Diagnostic Decision Tree

Step	Action	If Positive	If Negative
1	Initial Laboratory Tests	→ Confirm suspicion	ightarrow Broaden differential
2	Imaging Studies	→ Identify pathology	→ Consider specialized tests
3	Specialized Testing	→ Definitive diagnosis	→ Empiric treatment
4	Treatment Trial	→ Continue if effective	→ Reconsider diagnosis

Executive Summary

Case Description

A 68-year-old man with a history of long-standing hypertension, poorly controlled type 2 diabetes mellitus, and prior anterior myocardial infarction presents with progressive exertional dyspnea, orthopnea, and paroxysmal nocturnal dyspnea over the past two weeks. On examination, he is tachycardic and hypertensive, with jugular venous distension, bibasilar crackles, and an S3 gallop. ECG shows sinus tachycardia with Q waves in leads V1–V4, and transthoracic echocardiography reveals a left ventricular ejection fraction of 25% with akinesis of the anterior wall and moderate functional mitral regurgitation. Laboratory studies demonstrate elevated BNP and mild renal impairment. He is admitted for acute decompensated heart failure on a background of ischemic cardiomyopathy, with consideration for optimization of guideline-directed medical therapy, management of volume overload, and evaluation for device therapy.

Key Clinical Findings

• Elevated inflammatory markers (CRP, ESR)

Primary Recommendations

- Consider Acute Decompensated Heart Failure due to Ischemic Cardiomyopathy among differential diagnoses
- Obtain Chest X-ray for diagnostic confirmation

Primary Diagnosis Clinical Summaries

■ Key Clinical Findings

Finding	Supporting Evidence	Clinical Reasoning
heart failure	Clinical presentation	Key diagnostic indicator
ischemic cardiomyopathy	Clinical presentation	Key diagnostic indicator
decompensated state	Clinical presentation	Key diagnostic indicator
volume overload	Clinical presentation	Key diagnostic indicator
cardiac dysfunction	Clinical presentation	Key diagnostic indicator

■ Recommended Tests

Test Name	Туре	Priority	Rationale
Chest X-ray	Laboratory	Urgent	Diagnostic confirmation
Electrocardiogram (ECG)	Laboratory	Urgent	Diagnostic confirmation
B-type natriuretic peptide (BNP) or NT-proBNP	Laboratory	Urgent	Diagnostic confirmation
Complete metabolic panel	Laboratory	Urgent	Diagnostic confirmation
Troponin	Laboratory	Urgent	Diagnostic confirmation

■ Immediate Management

Intervention	Category	Urgency	Clinical Reasoning
Assess airway, breathing, circulation	Medical	Immediate	Critical intervention
Administer supplemental oxygen	Medical	Immediate	Critical intervention
Obtain IV access	Medical	Immediate	Critical intervention
Initiate cardiac monitoring	Medical	Immediate	Critical intervention
Assess volume status	Medical	Immediate	Critical intervention

■ Medications

Medication	Dosage	Route/Frequency	Indication
Furosemide	20-40 mg	IV / Every 6-12 hours	Diuresis for volume overload
Nitroglycerin	10-20 mcg/min	IV / Continuous infusion	Afterload reduction in hypertensive heart failure

Diagnostic Landscape Analysis

Detailed Diagnostic Analysis

The ensemble analysis identified **Acute Decompensated Heart Failure due to Ischemic Cardiomyopathy** as the primary diagnosis with limited consensus among 2 models.

Detailed Alternative Analysis

Diagnosis	Support	Key Evidence	Clinical Significance
Acute Coronary Syndrome Evidence: Model 1 confidence 0.4, Model 3 confidence 0.3	7.4%	2 models	Unlikely
Chronic Kidney Disease with Volume Overload Evidence: Model 1 confidence 0.3	3.7%	1 models	Unlikely
Pulmonary Embolism Evidence: Model 3 confidence 0.2	3.7%	1 models	Unlikely

Minority Opinions

All alternative diagnoses suggested by any models with their clinical rationale:

• Acute Coronary Syndrome (ICD-10: Unknown) - 7.4% agreement (2 models)

Supporting Models: model1, model3

• Chronic Kidney Disease with Volume Overload (ICD-10: Unknown) - 3.7% agreement (1 models)

Supporting Models: model1

• Pulmonary Embolism (ICD-10: Unknown) - 3.7% agreement (1 models)

Supporting Models: model3

Additional Diagnoses Considered:

Management Strategies & Clinical Pathways

Immediate Actions Required

Priority	Action	Rationale	Consensus
1	Assess airway, breathing, circulation	Clinical indication	50%
2	Administer supplemental oxygen	Clinical indication	50%
3	Obtain IV access	Clinical indication	50%
4	Initiate cardiac monitoring	Clinical indication	50%
5	Assess volume status	Clinical indication	50%

Recommended Diagnostic Tests

Test	Purpose	Priority	Timing
Chest X-ray	Diagnostic confirmation	Routine	As indicated
Electrocardiogram (ECG)	Diagnostic confirmation	Routine	As indicated
B-type natriuretic peptide (BNP) or NT-proBNP	Diagnostic confirmation	Routine	As indicated
Complete metabolic panel	Diagnostic confirmation	Routine	As indicated
Troponin	Diagnostic confirmation	Routine	As indicated
Complete blood count	Diagnostic confirmation	Routine	As indicated

Treatment Recommendations

Treatment recommendations pending diagnostic confirmation.

Model Diversity & Bias Analysis

Model Response Overview & Cost Analysis

Model	Origin	Tier	Cost	Diagnosis	Training Profile
deepseek-chat-v	China	Unknown	<\$0.01	Acute Decompensated Heart Failure due to Ischemic Cardiomyopathy	General
mistral-7b-inst	France	Free	Free	Acute Decompensated Heart Failure	General
shisa-v2-llama3	Japan/USA	Free	Free	Acute Decompensated Heart Failure with Ischemic Cardiomyopathy	General

^{**}Total Estimated Cost: <\$0.01**

Understanding Training Profiles

Training profiles indicate the type and depth of medical knowledge in each model:

Comprehensive: Extensive medical literature training with broad clinical knowledge

Standard: Standard medical knowledge base with general clinical training

Regional: Region-specific medical training reflecting local practices and conditions

General: Broad general knowledge, not specifically trained on medical literature

Alternative: Alternative medical perspectives and non-conventional approaches

Al Model Bias Analysis

Al model bias analysis is generated during orchestration (Step 2). This comprehensive analysis examines cultural, geographic, and training data biases across the Al models used.

Detailed Model Responses

Complete diagnostic assessments from each model:

1. deepseek-chat-v (China, Released: 2024-12-26)

Primary Diagnosis: Acute Decompensated Heart Failure due to Ischemic Cardiomyopathy (ICD-10: I50.23) - Confidence: 0.95

Differential Diagnoses:

- Acute Coronary Syndrome (ICD: I24.9) 0.4
- Chronic Kidney Disease with Volume Overload (ICD: N18.9) 0.3
- Hypertensive Emergency with Heart Failure (ICD: I11.0) 0.35

Key Clinical Findings:

- 68-year-old male with hypertension, diabetes, prior MI
- Progressive exertional dyspnea, orthopnea, PND
- Tachycardic, hypertensive, JVD, bibasilar crackles, S3 gallop
- ECG: sinus tachycardia with Q waves V1-V4

2. mistral-7b-inst (France, Released: 2023-09-27)

Primary Diagnosis: Acute Decompensated Heart Failure (ICD-10: I50.90) - Confidence: 1.0 **Differential Diagnoses:**

- Chronic obstructive pulmonary disease (COPD) (ICD: J44.0) 0.6
- Pneumonia (ICD: J18.9) 0.4
- Renal failure (ICD: N17.9) 0.5

Key Clinical Findings:

- Tachycardia
- Hypertension
- Jugular venous distension
- Bibasilar crackles

3. shisa-v2-llama3 (Japan/USA, Released: 2024-12-20)

Primary Diagnosis: Acute Decompensated Heart Failure with Ischemic Cardiomyopathy (ICD-10:

I50.21) - Confidence: 0.95 Differential Diagnoses:

- Acute Coronary Syndrome (ICD: I24.9) 0.3
- Pulmonary Embolism (ICD: I26.9) 0.2
- Cardiogenic Shock (ICD: I97.1) 0.15

Key Clinical Findings:

- Progressive dyspnea
- Orthopnea
- Paroxysmal nocturnal dyspnea
- Tachycardia
